

## Mathematics - Subject Overviews – MYP 3

\* All units taught in MYP Years 1-5 are continuously being developed and improved to best meet the needs of the students at LIS. Therefore, the following Subject Overview is only a reflection of current plans for the course. Some changes to this document may occur as a result of planning done throughout the academic year.

	Unit	Concepts	Global Context	Statement of Inquiry	Inquiry Questions	MYP Objectives ATL Skills	Content
Unit 1	<b>Numbers Explored from Microscopic to Astronomic</b>	Form  Representation Simplification	Orientation in space and time  Space Developments	Representing and simplifying quantities in different forms can help explore remarkable space developments.	<p><b>Factual:</b> What is a quantity? What are the laws of exponents?</p> <p><b>Conceptual:</b> How are quantities represented in different forms? How does simplification lead to equivalent forms?</p> <p><b>Debatable:</b> What does it take to make the next great discovery?</p>	<p><b>Criterion A:</b> i, ii, iii</p> <p><b>Criterion D:</b> i, ii, iii, iv, v</p> <p><b>ATL Skills</b> Information literacy Communication Creative-thinking</p>	<p>Scientific notation Exponential notation Standard form Rules of exponents</p> <p>Texts/Resources: DeltaMath Desmos Clark Creative</p>
Unit 2	<b>Linear Relationships</b>	Relationships  Change Patterns	Globalization and sustainability  Impact of human decision-making	Representing patterns of change as relationships can help determine the impact of human decision-making on the environment.	<p><b>Factual:</b> What is a pattern in mathematics, and can you give examples of patterns in daily life? How are linear</p>	<p><b>Criterion C:</b> i, ii, iii, iv, v</p> <p><b>Criterion D:</b> i, ii, iii, iv, v</p> <p><b>ATL Skills</b> Communication Critical thinking</p>	<p>Proportional relationships, slope-intercept form, solve linear equations, functions, graphs</p> <p>Texts/Resources: DeltaMath Desmos</p>

					<p>relationships represented graphically?</p> <p><b>Conceptual:</b> How does the representation of data through graphs and equations help us analyze and predict environmental changes?</p> <p><b>Debatable:</b> Does our understanding of the relationship between human actions and environmental impact drive a sense of personal and social responsibility for sustainability?</p>		Clark Creative
Unit 3	Linear Systems	Logic Models Systems	Fairness and development Social entrepreneurship	Modeling different restraints with systems of equations helps us make logical decisions involved with social entrepreneurship.	<p><b>Factual:</b> What is a system of equations and which strategies do we have to systematically solve them. What are some real-world examples</p>	<p><b>Criterion A:</b> i, ii, iii</p> <p><b>Criterion B:</b> i, ii, iii</p> <p><b>ATL Skills</b> Critical-thinking Transfer Organization</p>	<p>Linear equations System of linear equations Slope-intercept form Substitution Elimination Graphing</p> <p>Texts/Resources: DeltaMath Desmos</p>

					<p>where systems of equations have been applied to make logical decisions in social entrepreneurship?</p> <p><b>Conceptual:</b> How do models and systems interact within the context of social entrepreneurship?</p> <p><b>Debatable:</b> Should social entrepreneurs rely solely on mathematical models and systems when making decisions, or are there other factors to consider?</p>		Clark Creative
Unit 4	<b>Exploring Bivariate Data with Scatter Plots</b>	Relationships Validity Quantity	Identities and relationships  What it means to be a human	Validating relationships between quantities can highlight what it means to be human.	<p><b>Factual:</b> What are scatter plots, and how are they used to represent bivariate data?</p> <p><b>Conceptual:</b> How do scatter plots help us explore and understand relationships between quantities?</p>	<p><b>Criterion C:</b> i, ii, iii, iv, v</p> <p><b>ATL Skills</b>          Communication          Critical thinking          Information literacy</p>	Association Bivariate data Scatter plots Line of best fit Slope and intercept Two-way tables Relative frequencies Linear functions  Texts/Resources: DeltaMath Desmos Clark Creative

					<p><b>Debatable:</b> Should we rely solely on quantitative data to understand human identity and relationships, or are qualitative factors equally important? Can quantitative data accurately represent what it means to be human?</p>	
Unit 5	Compound Surface Area & Volume	Form Approximation Space	Scientific and technical innovation  Industrialization and engineering	Industrialization and engineering often rely on approximation of space in order to design forms.	<p><b>Factual:</b> Can you identify instances where approximation is used in everyday products and structures?</p> <p><b>Conceptual:</b> How do patterns in surface area and volume emerge in compound shapes?</p> <p><b>Debatable:</b> What is the importance of approximation in industrial design and engineering? Should designers</p>	<p><b>Criterion B:</b> i, ii, iii</p> <p><b>ATL Skills</b> Creative-thinking Collaboration</p> <p>Volume of cones Cylinders Spheres Congruence Transformations Lines Angles Input and output functions</p> <p>Texts/Resources: DeltaMath Desmos Clark Creative</p>

					prioritize spatial efficiency over aesthetic considerations in industrial design?		
<b>Unit 6</b>	<b>Triangles &amp; Pythagorean Theorem</b>	Logic Generalization Equivalence	Personal and cultural expression  Intellectual heritage	Exploring the geometric achievements of ancient Greek mathematicians highlights the role of logic in deriving generalizations and equivalence, fostering a deeper appreciation for the intellectual heritage of mathematical inquiry.	<p><b>Factual:</b> What logical principles underlie the Pythagorean theorem, as evidenced by its proofs developed by ancient mathematicians?</p> <p><b>Conceptual:</b> How do mathematicians determine the equivalence of geometric shapes? In what ways did ancient Greek mathematicians apply logical reasoning to advance geometric knowledge?</p> <p><b>Debatable:</b> Is there a limit to the generalizability of geometric principles, or do they hold true</p>	<p><b>Criterion D:</b> i, ii, iii, iv, v</p> <p><b>ATL Skills</b> Communication Critical thinking</p>	<p>Pythagorean theorem Proving Triangles Congruence Coordinate system</p> <p>Texts/Resources: DeltaMath Desmos Clark Creative</p>

					across all mathematical contexts?
